

A-FRAME BARRICADE

PEDESTRIAN BARRIER

A cost effective, hi-vis solution for civil construction sites requiring a hard barrier for pedestrian control.

Highly Visible & Stable

The Fortress Fencing A-Frame barrier provides excellent stability and protection for pedestrians. In situations where soft pedestrian protection is not adequate (such as flagging and star posts), the A-frame barrier provides an obvious visual barrier on site.

Rugged and Economical

The barriers are tough, which means once purchased they will last multiple projects saving you money. Plus, the long 5.8 metre length enables the A-Frame barriers to be rapidly deployed, saving time and money on site.

Assemble in Place

A-Frame barriers are assembled in place and all components are under 20kg, which means fast installation on your site with less risk of injury. Fortress Fencing's A-Frame barriers are shipped in kit form saving space in transport, which means we can ship large quantities efficiently.

Features & Benefits

- 5.8m in length
- 40.2mm diameter Steel blue
- Easy to assemble on site
